Dyspraxia is a neurological condition that affects coordination, motor skills, and various aspects of daily life.

Developmental co-ordination disorder (DCD), also known as dyspraxia, is a condition affecting physical co-ordination. It causes a child to perform less well than expected in daily activities for their age and appear to move clumsily.

If you would like to discuss, please speak with your child's class teacher or make contact with the SEND Team via the Welcome desk.
